

What is the role of the physical environment in the educational process?

Studies show that increasing the amount of daylight in classrooms can improve test scores. The creative use of color and texture can increase the motivation of students and teachers alike. Public access to a school's performance or meeting spaces, continuing education classes or athletic facilities can promote community participation.

For more than forty years, Craig Gaulden Davis has been designing school facilities that encourage educational achievement and support community involvement. We continually test new materials and techniques that enhance safety and durability while shortening construction schedules. We study and implement new systems that not only save time and money during the building phase but also lower operational costs and environmental impact.

As the designer of the first educational facility in South Carolina to receive the Leadership in Energy and Environmental Design (LEED) certification from the US Green Building Council, Craig Gaulden Davis has the experience to design and deliver schools that educate today's students and help preserve the environment for generations to come.

▼ CRAIG GAULDEN DAVIS

Craig Gaulden Davis applies the arts of architecture, master planning and interior design to create inspiring spaces that serve practical functions.

Whatever the budget or program, the right solution offers beauty, functionality, and longevity. That's why Craig Gaulden Davis views each new project as an obligation to uncover exceptional answers. For nearly a half-century, Craig Gaulden Davis has been building a reputation for professional excellence and innovative design.

It's what we believe in, personally and professionally.
